

Thank you Jessica, Upon detailed review of the new draft regulations I see where the Small Water System language has been revised to **not** mandate a arbitrary 25% reduction but rather we must at least implement a two day per week watering schedule, which we have already done. In this case I would retract our comments based on that.

Subject: Small Water System Suppliers - New Draft Regulations

Hello Jessica, I am attaching the Channel Islands Beach Community Services Districts comments based on the initial draft regulatory frame work . Those comments still apply today. As a small water system to have an arbitrary 25% cutback requirement placed on us is unacceptable. We would propose that small water systems who can demonstrate compliance within the structure set forth for all others be given the same consideration.

I would appreciate acknowledgement of my comments and if possible an opportunity to discuss this with you. Thank you, Jared
